Received and published: 22 December 2017

Thank you for reading my article and for careful and careful evaluation. And all the suggestions and criticisms will be in the final version of the article. Thanks also for the suggestion of literature on the subject, some had already read. I disagree on just that work does not bring any contribution, after all in science divergent opinions thrives countless fruits. The paper presents a simple and unprecedented methodological application on the subject. Trying to show independent of the agricultural culture used extremely vulnerable areas. Best Regards
