Received and published: 9 March 2018

RC: One point not discussed in my first comments: Where is the relation with early warning system? It is a little explained but it is not justify the term "early warning" in the title. I think you have to improve this topic in your text if you want to improve your it.

AC: In order to be consistent between title and contents of the manuscript we propose to change the title From: Regional physically based landslide early warning modelling: soil parameterisation and validation of the results. To: Application of physically based model to forecast shallow landslides at regional scale.
