Thanks for Dr. Scaringi's valuable comments to the paper at first. His comments were very useful to increase the quality of the paper. Dr. Scaringi's comments include 4 aspects: (1) landslide inventories in this study. (2) Spatial resolution of land use data. (3) Samples of landslide data for modeling and validation. And (4) threshold for large size of landslide. We tried to answered these comments and questions, and also improved the paper base on these comments. Detail could be seen in the supplement.
