Received and published: 20 October 2018

We thank the reviewers for their time and effort in providing constructive comments on our manuscript. We plan to action most of these (and have supplied counter arguments in cases where no action is proposed) and believe this will result in substantive improvements to the paper. Please find in the supplement our response to the reviewers. We have compiled this in tabular format for ease of reference and in a single file as many of the comments overlap in either sense or topic.
