

## ***Interactive comment on “Monthly and seasonal rainfall (1963–2017) for a typhoon-influenced area in a Chinese karst basin” by Chongxun Mo et al.***

### **Anonymous Referee #1**

Received and published: 29 September 2018

The present manuscript presents the characteristics of monthly and seasonal rainfall and its correlation with typhoons in a Chinese karst basin. The work is interesting and inspiring to the field of the understanding of natural hazards and their consequences. Over all, the applied methods are valid, the results and conclusions are presented in a clear and well-structured way. Therefore I recommend this paper to be published. And it is better if the authors consider the following mentioned remarks and further improve the manuscript before submitting the final version. The authors should provide at least some information about how typhoons affect the studied area in the introduction section. Besides, it could be useful for the reader if the authors present a flow chart of the proposed procedure.
