Thank you for your detailed read on our work. The rest is the reply to your comments: (1) The Main Himalaya Thrust (MHT) is the general designation of three thrust faults along Himalaya that are Main Central Thrust (MCT), Main Boundary Thrust (MBT) and Main Front Thrust (MFT). These three faults converged into one, which is supported by seismic profile (Hauck et al., 1998; Tectonics). We will correct this in the text and figures related. (2) We will correct the spelling of Sunkoshi. (3) When we uploaded the manuscript, we mistook the rough draft to upload for discussion. In the newest manuscript, we have checked the references detailed and corrected the mistakes about references.
