Thank you for your suggestions for our manuscript that are helpful to increase our paper. We will seriously consider your suggestions and make corresponding modifications. (1) It is difficult to integrate the intensity map of Tibet and Nepal for that the evaluation scale may be different. And we didn't survey in Nepal. Therefore, we didn't put the intensity map of Nepal side together with that of China side. However, we will try our best to do this work based on many other published materials next. (2) We have make the KMZ file and part of corresponding photos to show the surveyed sites, which would be as supplement.
