

No further revisions to the manuscript were required.

Please note the following for final production:

1. A typographic error in the title has been corrected in the files uploaded here; a comma has been added directly after 'Bolivia'. This may also need to be changed in NHESS's document/tacking system.
2. A relevant, very recently published paper has been added to the references and in text citations (in two places), but the text has not otherwise been altered. In both cases, this citation was added to existing lists of citations.
3. Line work in some figures had to be very slightly adjusted to ensure they conformed to the journal's formatting requirements (particularly page width sizes).
4. No specific 'Key Figure' has been prepared as this was not mentioned or required at any earlier stage of review. Figure 8 is probably the most appropriate figure for this purpose, but does not 'stand alone' as it includes references to other figures. If necessary, we can produce a proper 'key figure' for the final printing.
