Interactive comment on "Low-hanging fruits in large-scale fluvial landscaping measures: trade-offs between flood hazard, costs, stakeholders and biodiversity" *by* Menno W. Straatsma et al.

Anonymous Referee #2

Received and published: 20 October 2018

The article is interesting but far from the goal that the authors promise in the preface. The automatic decision-making system is not adequately displayed or analyzed. In any case, the article is interesting, I suggest that the preface be adapted to the content. Although the article presents an extensive substance, which, due to insufficient space, is superficially treated. I suggest that the authors reorganize the article and devote themselves to a more specific topic of their choice. It is possible to process only stakeholders' questions. A minor error, on page 2e, is referred to in Figure 3e, and should be 2e.
