Received and published: 26 November 2018

Discussions are so comprehensive and interesting; in result, its consequences are helpful to the researchers to understand the review process. I appreciate the effort of an eminent reviewer(s) for their brainstorming comments and also appreciate the author(s) to justify it rigorously and placed it delicately.

As per my opinion, paper will be accepted for publication after including all the technical suggestions by the reviewer in revise version, so at present it will be considered as major revision, considering technical revision.

I concern behalf of the stakeholder that the prescribed approach would be applicable for dam break cases before the break or after the break. Please include your comment

[Discussion paper](#)

in revised version.

Is prescribed approach applicable only for china's dam? Or applicable for any dam break case in the world, kindly include your justification in conclusion part.

I am waiting to receive your revised manuscript in a week time.
