Dear Jerome and Co-Authors,

Thank you to reviewers Hans-Joerg Laimer and Anonymous Reviewer 2 for their helpful input and feedback. Both reviewers commented on the value of databases like these and encourage you to bring out the utility of your work in the discussion section.

Reviewer 2 has made some important comments about the methodology that must be addressed, possibly requiring some reanalysis of the database or a clearer justification for the methods chosen and findings made from an uncertain database.

There are some issues throughout with the writing such as English language, consistency and lack of references to support some statements made.

Reviewer 2 has also commented that the paper could be shortened by reducing or combining the number of figures, and focusing more on the key results rather than describing all results. I believe this will make a stronger, more focused paper.

With these medium to major level revisions, the paper will make a good contribution to NHESS, as highlighted by reviewer 1.

I look forward to reading the revised manuscript.

Kind regards,

Faith
