Interactive comment on "Research on Occurrence and Development of Pasture Drought Events in Alpine Grassland using the Drought Threshold" *by* Tiaofeng Zhang et al.

Anonymous Referee #1

Overall, the experiment in this paper is useful and the results are also helpful for better drought monitoring in different regions. However, the structure of this paper is not well constructed and there are too many grammar problems which make me hard to read. There are many points that need clarification and major revision. I am not convinced that this paper is suitable to be published in NHESS in the present form. I provide some general and specific comments in the attachment.
