Interactive comment on "Research on Occurrence and Development of Pasture Drought Events in Alpine Grassland using the Drought Threshold" *by* Tiaofeng Zhang et al.

Anonymous Referee #2

Received and published: 14 January 2019

This paper discusses the important issues of alpine grasslands including the soil moisture, drought duration and intensity based on daily 10-minute interval data. Researchers had a nice experimental setup. The results should be published but the quality of the paper at this point do not satisfy the publication quality. I suggest publishing after careful revision. Need to revise the language and grammar in order to make the paper clear. I am sure, authors had clear story to tell and supported by the experimental results, but for the scientific paper it has to be clearly written and explained thoroughly.
