## Interactive comment on "3-Dimensional Rockfall Shape Back-Analysis: Methods and Implications" by David A. Bonneau et al.

## **Anonymous Referee #2**

Received and published: 11 June 2019

The manuscript is interesting and has important conclusions which could prove useful for authors and studies dealing with 3-D block measurements for rockfall hazard. However - there is some lack of global link and appealing to a larger audience which can help the manuscript become relevant for a larger audience.

The supplement PDF attached contains general and specific comments for the authors.
