We thank the reviewer for his thoughtful remarks. The reviewer’s comments have been copied in a separate document (supplement) and divided as needed to reply to every point of the suggestions and opinions. Our answers are highlighted in italics and green colour. We think that our arguments are correct and sound, but if the editor and both referees ask again to eventually remove some of the chilling models considered, we would be willing to do so.

Please also note the supplement to this comment:
