Interactive comment

Interactive comment on "Projected changes to extreme freezing precipitation and design ice loads over North America based on a large ensemble of Canadian regional climate model simulations" by Dae II Jeong et al.

Dae II Jeong et al.

daeil.jeong@canada.ca

Received and published: 14 March 2019

We thank Mirela-Adriana Anghelache for these constructive comments to improve the readability of this manuscript. The abbreviations have been expended in the text of the revised manuscript. Please see lines 1, 8, and 13 on page 2. Although, we agree that footnotes can be a better way to explain the abbreviations for readers, we have avoided them based on the suggestion of the NHESS. Chapter 2.3 has been reformulated in the revised manuscript for better understanding, based on this comment. Please see lines 5-13 on page 5.
