This scientific article is very well structured and shows an exhaustive work on its subject. There are many abbreviations due the overviews and comparisons of several simulation models. Yet, there are some left aside or explained at the bibliography. That's why I suggest that some abbreviations to be explained inside the text or better in a footnote, for example the term CSAI. Actually, I think that the insertions of footnotes is a good option, that shortens the phrase and give the reader the opportunity to see immediately the meanings of uppercase letters. In the sub chapter, 2.3 GCM simula-
