Received and published: 21 June 2018

Dear editor,

thank you for inviting me to review this paper.

The findings presented in this manuscript all base on a model that is described in a paper that has been submitted but, to date, not accepted nor published. Since the model is not presented into sufficient detail in this work, I find very difficult to comment on the quality of the research outcomes described therein. From the short description provided, it is very likely a valuable model. However, the rest of the paper and the findings presented therein are all dependent on this model. It would have been better if: 1) this paper was submitted after the other paper was accepted; or 2) the authors

[Discussion paper](#)

submitted the paper with the model description as a companion paper.

Therefore, I think that this submission, which I believe is a good contribution that would deserve the publication, is just not timely. I am more than happy to review this manuscript once the paper describing the model has been accepted and published.

Thanks Regards
