Received and published: 17 July 2019

This is a well documented paper. It presents a methodology for assessing desertification in south-east Vietnam. This methodology has been successfully presented in the Mediterranean region previously. The paper constitutes and thorough and detailed approach for desertification identification and assessment. There are two questionsclarifications to be provided by the authors: 1. A clear distinction should be made in the text between RI and ESA to avoid any confusion. 2. An explanation is necessary for multi-criteria analysis, if it is applied, how and at what stage in the paper.
