Case Study: Risk Analysis by Overtopping During an Upstream Landslide in Peñitas Dam, Mexico Humberto J.F. Marengo¹, Alvaro A. Aldama²

Dear Elena:

I am sending to you the following: 1. A short comparison of the methods such a general reader of NHESS can understand the language and the methodology established and be possible to generate a generic statement NHESS conclusion.

C1

2. With regard to some technical observations made, I am sending a copy of 375 page of the Probability Concepts in Engineering Planning and Design of Ang & Tang (Vol.II, 1984) where is shown the concept of spillway discharge, that is common in hydraulic and civil engineering. Note: The copy is included at the end of the file.

Best regards.

Humberto Marengo
