Interactive comment on "Extremeness of recent drought events in Switzerland: dependence on variable and return period choice" *by* Manuela I. Brunner et al.

Anonymous Referee #1

In my opinion this is a very good approach, ideal for publishing.

Just a few comments:

I would like to see more about "run method" (Page 2, Line 18). What exactly do you mean by using this phrase?

I would also like to see more about "AND return period" (Page 7, Line 14). I think that you should need to add a new paragraph explaining more about that and (Brunner et al., 2016).

Thank you.
