Dear Editor and referees, In this answer you will find the improvements made in the manuscript. They are highlighted in green. We have added section 6 where we explore in a simple way the place of the lithosphere where microcracks could occur. In addition we added three figures explaining the above.

We think that the work has improved substantially so we thank you. If you find errors, do not hesitate to contact us.

Best regards Patricio Venegas-Aravena on behalf of the authors.
