Review on “Italian Tsunami Effects Database (ITED): the first database of tsunami effects observed along the Italian coasts” by Alessandra Maramai, Laura Graziani, Beatriz Brizuela

It is evident that tsunami catalogues and databases are very useful for scientists, decision makers, and citizens. That is why I consider the created Italian tsunami effect database to be an important step in tsunami knowledge dissemination and, therefore, recommend that the reviewed paper should be published.

C1

There are some minor comments:

1. The mentioned link <https://tsunamiarchive.ingv.it/ited> does not work
2. I have not found which languages are used in the catalogue, I recommend using both - Italian and English, or, it may be published in several languages for tourist proposes.

I recommend publishing this paper as it is.
