Many thanks to Anonymous referee #1! (1) the paper would be modified in detailed and revised according to the opinions of the evaluation experts, focusing on the specific description of cases and avoiding the generalization, description, and repeatability of the paper as much as possible. (2) after polishing by native English experts to provide better English expression, revise case analysis in the article and provide more evidence and data. (3) And refers to the international classification of geological hazards and standardize the classification terms of disasters; (4) modify the discussion to provide some more interesting hint of classifications that are inconsistent with those widely accepted in the literature, such as the word "collapse" change to "rockfall" according to the Varnes classification.

Please also note the supplement to this comment:
