

Interactive comment on “Failure modes of loose landslide deposits in 2008 Wenchuan earthquake area in China” by J. Gan and Y. X. Zhang

Anonymous Referee #1

Received and published: 12 June 2019

The paper is frequently too generic, descriptive and repetitive. English style is poor, words are often not suitable and several mistakes are present throughout the text. There are many sentences that are not supported by any kind of proof or data. This cannot be accepted in a scientific paper. The classifications used are not aligned with those widely accepted in the literature, as for example the term "collapse". The discussion is not clear and does not provide interesting hints.
