Received and published: 4 February 2020

Dear Andreas! Thanks for your comprehensive revision of the paper and very good suggestions to improve the manuscript. I have uploaded a revised version which contains all your questions and comments (-> yellow, as well as the ones from the first reviewer Tanja Bolic (green)) and our answers and modifications in track change mode. Section 5 has been rewritten according to the reviewers recommendations. Find the file here (somehow I could not upload it for your response, you can also find it when you click on the supplement I have uploaded or the first reviewer): <https://edrop.zamg.ac.at/owncloud/index.php/s/AToCeesY2QXFHRo> BR Marcus
