Received and published: 13 December 2019

We thank Anonymous Referee #3 for reviewing our manuscript “A methodology to conduct wind damage field surveys for high impact weather events from convective origin”. We believe that the comments provided help to reconsider the structure of the text and improve the clarity of some aspects of the manuscript, particularly to explicitly mention that our study is focused on meteorological aspects which may complement other general features of general post-disaster damage surveys.

Please, see the Supplement file attached, where it is provided an item-by-item reply to Referee #3 comments.
