

## ***Interactive comment on “Why keep alert sirens in France?” by Johnny Douvinet et al.***

### **Anonymous Referee #2**

Received and published: 28 March 2020

Dear authors,

I have read the article and I have also reviewed the references and the situation of sirens in France. While the article sends a clear message its designation as a research article actually is not proper. There are some research questions, but there is no consistent scientific approach. I would recommend trying to asses if it is possible to convert the article to a brief communication or invited perspective. There are no material and methods sections of the article, and it seems there are no new concepts, ideas, methods or data, but is compiled from previous research of the authors and from other sources.

I would recommend trying to fit the methodology into qualitative research.

I also attached in the .pdf version of the article some specific comments.
