

## Technical Correction

Dear Editor and reviewers:

We corrected our definition of “Hurricane” in the Introduction session. This sentence has been revised as:

**Hurricane, a specific type of tropical cyclone with wind speed of 74 miles per hour (mph) or higher, is one of the most devastating natural hazards in the world and is recurring more frequently than ever in coastal areas (Vecchi and Knutson, 2018).**

Specifically, in this correction we updated the affiliation and contact information for one of our authors, per his request. The authors and affiliation information are attached here:

**Xiao Huang<sup>1</sup>, Cuizhen Wang<sup>1</sup>, Junyu Lu<sup>2</sup>**

<sup>1</sup>Department of Geography, University of South Carolina, Columbia, 29208, U.S.A

<sup>2</sup>School of Community Resources and Development, Arizona State University, Phoenix, 85004, U.S.A

We also confirmed our funding source and modified the “Financial support” session as:

***Financial support.* This study is partially supported by a 2018 ASPIRE Grant and a 2018 SPARC Graduate Research Grant from the Office of the Vice Program, University of South Carolina.**

We appreciate your time.
