Dear Xiu Thank you for your recognition of our work. It is very true that the focus of this paper is not on the evaluation method. After all, various types of evaluation methods have been widely used in landslide or debris flow susceptibility assessment. Therefore, our focus is to explore the potential relationship between two natural disasters through an excellent performance evaluation method. We are sorry for the mistake. We agree to recheck the serial number of the figures. Thank you again. Best wish, Zhu
