

Interactive comment on “Assessing and zoning of typhoon storm surge risk with GIS technique: A case study of the coastal area of Huizhou” by Si Wang et al.

Anonymous Referee #2

Received and published: 11 July 2020

Wang and co-authors have addressed all my comments from my last-round review into the revised manuscript. This paper provides a study for the up-to-date assessing and zoning of typhoon storm surge risk with GIS technique in China, fitting the scope of the journal.

No further comments from my side. Here, I suggest this manuscript to be published in NHSS.
