Received and published: 29 October 2020

Thank you for attention to and appreciation of our paper and your thoughtful comments. We will address the comments below and in a possible revision of the paper.

We will include more references to literature, similar studies and reports on blue green infrastructure.

With regard to the preselection of measures, we will extend the description of that process, potentially abbreviating the description of economic frameworks.

We will, also in response to the first referee include a table with the research sites

[Printer-friendly version](#)

[Discussion paper](#)

and their main climate risks in the introduction, as well as a brief description of each research site. We will merge tables 1-3 and enlarge the arrows in figure 1.

The reference to “part 1” is a mistake and should be “section 2”. This will be changed in the final draft. We will also provide an explanation of the “risk assessment”.

We will elaborate on the “pairwise comparison” and the “indicators”, use consistent language in referring to them and make the section easier to read by improving the language.

We will check the manuscript for any acronyms that have not been introduced in their full form, add subheadings to the discussion and give a brief description of the measures that are mentioned in the text.

We agree that thresholds is a more appropriate term than values and kindly accept the suggested change of the table caption.

We hope we have covered the main points to your satisfaction and want to thank you again for your thoughtful review.
