Received and published: 24 September 2020

We are very grateful to the reviewer for the insightful comments and suggestions. Please note that any corrections/revision corresponding to the reviewer's comments in the revised manuscript are shown in blue colour.

Since we have re-performed the simulation with 6 physical ensemble members and all plots have been also re-made. Therefore, we have re-written some descriptions on the figures. Please note that these rewritings are shown in red colour in the revised manuscript.

Additionally, following the reviewer#2's comments, we removed most of the descriptions and figures of ERA5 (some of them are transferred to supplemental information).
