1. What is the definition of flood vulnerability?

Flood vulnerability is defined as the degree to which how people or societies are likely to be affected by flood events, i.e., the consciousness of the community or people to flooding events, considering the socio-economic, environmental, and physical elements.

2.What is the difference between flood vulnerability and flood susceptibility?

Flood susceptibility is defined as the elements present within the system which deter-

mine the chances of being harmed at the time of hazards, whereas flood vulnerability is an integrated approach of exposure, susceptibility, and resilience.
