Dear authors,

I'm sorry for the delay in the reviewing process that was also amplified by the Covid-19 pandemic situation we are all living currently.

We have now received comments from 2 reviewers on this manuscript. As you've seen, the reviewers have different views on the merits of the manuscript. While one of the reviewers ask only for minor changes the second requires many clarifications and major changes and suggests a rejection of the paper. Reviewer#2 provides a

very comprehensive report on the extensive number of problems that the manuscript raises, ranging from the datasets and methods used, lack of appropriate references, major issues with validation, etc, etc. My own assessment is much closer to this second reviewer.

I recommend the authors to withdraw their submission from further review.

Best regards Renata
