Dear Colleague,

we thank you for your constructive comments. We agree with your suggestion to discuss a little more the framework of the Campanian Plain and the role of Roccamonfina volcano. Actually, we are accurately studying the volcanism in the Campanian Plain, in a new perspective which considers such a whole area as the most volcanologically important and active, rather than the single volcanoes which erupted in recent times. Roccamonfina is in fact, in our opinion, just the northernmost boundary of such a larger volcanic area. We will also add, just as you suggest, more details (in the figure) about the uplift episodes occurring at Campi Flegrei, which is the area most concerning, at

C1

present, giving the long lasting unrest.

Best Regards
