

General remarks

The submitted article ‘Lessons learned about the importance of raising risk awareness in the Mediterranean region (North Morocco and West Sardinia, Italy)’ has been considerably improved and merits to be published. The authors have done an impressive work in this revised text, and I consider the submission of the questionnaires to be a very important contribution per se. There is now clarity on the methodology followed and the statistical analysis, while the discussion flows much better, highlighting important concerns in dealing with vulnerability to natural disasters.

Technical comments (minor):

L83: a verb is missing somewhere

L204: is ‘associates’ the exact word? could the authors mean ‘associations’?

L207: perhaps ‘phenomena’ instead of ‘phenomenon’?

L210: ‘the information’ sounds like something is missing (access on information, the level of information provided, informing the public...?)

L257: the scientists (plural)
