Dear editor, dear reviewers,

Many thanks for your feedback on our revised manuscript.
We have made the final corrections as requested by you.

Best regards
Benni Thiebes and the other authors

Minor remarks:

Line 51: I suggest to change the sentence to: "Such bottom-up approaches represent and are an important mean to facilitate inclusive, integrative, transdisciplinary, and synergetic collaboration."
Reply: Changed as suggested.

Table 1: I find the table difficult to read and a bit confusing. Could you add a little more description to the caption. Are the step changes described in the different lines of the table? Some points start with capital letters, others not. Is this done on purpose?
Reply: We have changed all lines to lower-case letters and have also used this style for the figure 1. We have changed the caption to: "Table 1: Step changes and research needs along the priorities of the SFDRR.". We have also added bullet points to the table make reading easier. (the original multi-line table was meant to make formatting and reading easier, however, your comments shows that this was rather confusing).

Line 105: This link looks a bit messy with the "test" and "Draft" in it. I am not sure if using compressed links (e.g. https://rb.gy/dffmab in this case) meets the requirements of the journal but it could be worth checking.
Reply: We agree that the citation and the link are messy. We have checked the web and found the final version of the report. We have thus changed the citation in the text as well as in the list of references.

Line 108: Start reference Fleming et al. 2020 in new line
Reply: Changed as suggested.

Line 113: Start reference Losier et al. 2019 in new line. This will also repair the link to Kaewunruen et al. (2021), which is currently not working due to the missing space.
Reply: Changed as suggested.

Line 127: I clicked on the url provided and received a bad request. Copying the full url into a browser did work. Did the line break prohibited the link to open?
Reply: We think that the "." at the end caused the link to not work properly. We have changed this.
