Dear editor,

While proofreading the typeset version of our manuscript nhess-2021-360 "Estimating global landslide susceptibility and its uncertainty through ensemble modeling" I noticed a tiny error in the specification of a variable. In table 1, we specified the *profile soil moisture climatological statistics* to cover a depth of 0-100 cm, although it actually is the depth of 0 cm to bedrock. This erroneous declaration slipped us in the previous proof-reading steps.

—

With your approval, we would like to change this detail in the final typeset article.

Thank you for your consideration.

Yours sincerely,

Anne Felsberg
