Review #2 (Anonymous)

<https://doi.org/10.5194/nhess-2021-388-RC2>, 2022

The article describes interesting and possibly applicable method to evaluate hydrogeological conditions governing deep seated gravitational slope deformations. I found no major drawback of the presented article, while I think the method can be quite useful even for practical landslide mitigation purposes.

We thank the reviewer for the positive feedback.
