

Editor

Dear Marc Lemus-Canovas,

I am pleased to inform you that the revised version of your manuscript can now be accepted for publication in our journal Natural Hazards and Earth System Sciences (NHESS). One reviewer did point out some inconsistency in the writing (see below). But I trust that you will address these at the proof stage.

You will soon be contacted by the journal publication office for the preparation of the final version of your manuscript. Please respond promptly to the requests of the publication office, as this will condition the time of your publication, and read carefully any copy-editing recommendations that they make. Let me remind you that final publication of your paper on the journal web site is subject to the payment of the appropriate service charges. Also, do not forget that as an open-access journal you can freely distribute your paper once it is published.

I take this opportunity to thank you and your co-authors for having selected Natural Hazards and Earth System Sciences (NHESS) for the publication of your scientific work. I look forward to receiving further contributions to our journal from you and your co-authors.

Cheers,
Dan Li
NHESS Editor

Reviewer comments:

No further comments on the data and analyses. There still is some inconsistency in the writing (e.g. use of analog vs. analogue) and other typographical errors. Authors are encouraged to give the manuscript a careful proofread.

Dear Dr. Dan Li,

Thank you very much for accepting our manuscript for publication in Natural Hazards and Earth System Sciences. We sincerely appreciate the constructive feedback provided throughout the review process.

We would like to inform you that we have addressed the final comment raised by the reviewer regarding consistency in the writing. The latest version of the manuscript has been carefully proofread, and these corrections have been integrated into the final submitted version.

We look forward to collaborating with the publication office in the final steps of the process.

Kind regards,

Marc Lemus-Canovas (on behalf of all co-authors)
